

SchmartBoard Newsletter

January Special

Our fully populated Parallax Propeller Development Board for only \$15. (Usually \$23) This board is populated with everything except memory and the optional Parallax Crystal. The Propeller chip makes it easy to rapidly develop embedded applications. Its eight processors (cogs) can operate simultaneously, either independently or cooperatively, sharing common resources through a central hub. The developer has full control over how and when each cog is employed; there is no compiler-driven or

operating system-driven splitting of tasks among multiple cogs. A shared system clock keeps each cog on the same time reference, allowing for true deterministic timing and synchronization. Two programming languages are available: the easy-to-learn high-level Spin, and Propeller Assembly which can execute at up to 160 MIPS (20 MIPS per cog).

Schmartboard In The News

When using surface mount components on a breadboard, a SMT to DIP adapter is your best solution. For SMT to DIP adapters, only Schmartboard has "EZ" technology to make it fast, east and flawless. Here is a perfect example of a project that might be more difficult without Schmartboard. The project is entitled "Real Time Clocks and Flash Memory".

Happy New Year from Schmartboard!!

A personal note to our valued customers

As a small but innovative company, we rely on our happy customers to tell their friends and colleagues about Schmartboard. The best place to direct them is to receive a **free demo board and chip.**

Additionally, we invite you to subscribe to any of our social media sites. If you choose to leave a kind word in the comments section, we would most appreciate it!

Lastly, Schmartboard started originally as an engineering services provider. We still offer PCB Design, fab, assembly, and other services. **Please consider getting a quote** from us for your next project. We are good at what we do and priced aggressively.
