How Do You Teach a BeagleBone a New Trick?

We have just released our **new family of BeagleBone Prototyping Capes**. The basic BeagleBone Cape can be used to add through hole circuitry to create your own function specific cape to your BeagleBone project. On this board, based on customer feedback, we have designed in ample room for power and ground connections. Included are two of our 2x13 special extra long headers to make life easier when adding capes to your BeagleBone Black projects. Additionally for your convenience, we have thrown in a 170 tie point breadboard with adhesive backing.

When bundled with any of our SMT to DIP adapters, you convert this board into one that can utilize the more advanced applications that are usually reserved for surface mount ICs. We support most packages and pitches for SOIC, QFP, QFN and DFN. Like with our Arduino and Raspberry Pi families, this is the only real option on the market to easily add circuit functionality to your BeagleBone that include the SMD components.

The products are shipping and range in price from $10 to $18. That is how you teach a BeagleBone a new trick.

10% Off On Our New Bus Jumpers in the Month of October

We have continued our 10% discount on this new product line. This unique line of specialty jumpers gives engineers an easier way to preform functions that sometimes require multiple hands. We designed these with a great deal of customer input. The uses are many, but in short this product allows you to connect multiple points to a single common signal, save space and reduce jumper use in tight areas such as ground. It can also be used with electronic testing equipment such as logic analyzers as a signal interceptor to more easily access test points. We throw in a row of 40 headers for your convenience. The cost for a 5 pack is $9.00

A personal note to our valued customers

As a small but innovative company, we rely on our happy customers to tell their friends and colleagues about Schmartboard. The best place to direct them is to receive a **free demo board and chip**.

Additionally, we invite you to subscribe to any of our social media sites. If you choose to leave a kind word in the comments section, we would most appreciate it!

Lastly, Schmartboard started originally as an engineering services provider. We still offer PCB Design, fab, assembly, and other services. **Please consider getting a quote** from us for your next project. We are good at what we do and priced aggressively.
