

SchmartBOARD™ NEWS

Contest for Education

SchmartBoard has quickly become the tool of choice for many educational institutions and their students. Senior projects for EE students have been a perfect application for SchmartBoards. Another has been home school projects. Have you used SchmartBoard for a senior project or other application for education? SchmartBoard would like to hear from you.

We are going to give away 10 notebook bags for the best information about SchmartBoard uses for education. We will judge you on your SchmartBoard application and also your presentation of the information. That means if you send us good text information that is good...if you include photos of yourself and circuit, that is better. If you include video of you talking about your circuit or your SchmartBoard experience...that is best!

Any level of education is admissible. The contest is open to students and educators. By responding to this contest you have agreed that the information, photos, videos, etc can be posted on the Internet and are public domain.

An Endangered Species?

Yes, never mind the obscure species of grass that is endangered...our concern is the small electronic component retailer. Don't get us wrong....we love Mouser and our online sellers as well. When a seller with a retail location sells SchmartBoard though, our technology can be introduced personally by a SchmartBoard evangelist who carries us, believes in us and verbally promotes us. They also understand our technology and can talk to everyone from the novice hobbyist to the seasoned engineer.

Some examples of these resellers are Anchor Electronics in Santa Clara CA, Tanner Electronics in Dallas TX, Active Tech Electronics throughout Canada, Circuit Specialists in Phoenix AZ....I'm sure I'll hear from some who I have not mentioned here! We value these distributors and are always happy to work with them when they approach us. Should you know of a local retailer who should carry us, please tell them to contact us. BTW, we just signed a small new retail location in Downtown Toronto. Creatron, Inc. can be found at 255 College Street in Toronto. If you visit, let them know Schmartboard sent you.

Education Program

Electronics Education generally teaches electronics theory, not hand soldering skills. SchmartBoard|ez technology makes it easy to hand solder SMT parts. Thus, SchmartBoard opens up opportunities for students to successfully utilize today's technology for senior projects and other class requirements.

We offer a 20% discount to universities and university students. Other advantages are available to institutions who sign up for the program including some demo boards for lab's to demo to students. To take advantage of the program, please fill out our [education program application](#).

SchmartBoard March Contest Winner

This month's winner of a \$30 combo pack is Kareem Matariyeh a student at University of Nevada, Las Vegas. According to Kareem, SchmartBoard "Made prototyping my senior design project simple."
