

### New Product Line - We Call Them 4 Way Bus Jumpers

Schmartboard today has released a unique line of specialty jumpers which will give engineers an easier way to perform functions that sometimes require multiple hands. We designed these with a great deal of customer input. The uses are many, but in short this product allows you to connect multiple points to a single common signal, save space and reduce jumper use in tight areas such as ground. It can also be used with electronic testing equipment such as logic analyzers as a signal interceptor to more easily access test points. We throw in a row of 40 headers for your convenience. The cost for a 5 pack is \$9.00

### 10% off on these new bus jumpers in the month of September

### Upcoming Products to Round Up a Productive Year

- 1) In September we will release a Beagle Bone add on prototyping board family. Like with our Arduino and Raspberry Pi boards, these will be the only prototyping boards on the market for this platform that allows people to easily create add on circuits that contain SOIC, QFP, QFN/DFN with pitches as tight as .5mm.
- 2) In October we will release a line of products that allow one to repair or add components to existing circuit boards. We have received extremely high interest on this product line. Here is more information on these: <http://blog.schmartboard.com/blogschmartboard/2014/08/schmartpatch-for-repairsand-screw-ups.html>
- 3) By the end of the year, we will also release prototyping boards for BGA in which soldering is optional. Not only will this be a unique solution, making us the only prototyping board company to support BGA(as with QFN today), but unlike the price of sockets, it will not break the bank...these will be WELL UNDER \$100

### A personal note to our valued customers

As a small but innovative company, we rely on our happy customers to tell their friends and colleagues about Schmartboard. The best place to direct them is to receive a **free demo board and chip.**

Additionally, we invite you to subscribe to any of our social media sites. If you choose to leave a kind word in the comments section, we would most appreciate it!

Lastly, Schmartboard started originally as an engineering services provider. We still offer PCB Design, fab, assembly, and other services. **Please consider getting a quote** from us for your next project. We are good at what we do and priced aggressively.
